

“

*Since the install, I have noticed a huge difference when taking showers. My clothes feel different too after doing a few loads of laundry. I would highly recommend Tri-State Waterworks. Very friendly, quality work, and a fair price.*

”

## What are VOCs?

Volatile organic compounds (VOCs) are chemicals that both vaporize into air and dissolve in water. VOCs are pervasive in daily life, because they're used in industry, agriculture, transportation, and day-to-day activities around the home. The level of VOCs in your homes water supply can vary day to day and cannot be tracked based on the annual reporting from your water company.

## Whole House Carbon Filters

# What is a Carbon Filter?

**Carbon filtering** is a method of filtering that uses a bed of activated carbon to remove impurities from a fluid using adsorption. In water treatment, typically this means coconut shell activated carbon. There are a couple different types of Whole Home Carbon Filters.

1. Block Carbon Filters
2. Carbon Tank Systems

Depending on the application, both options can be viable. For a home, the Carbon Tank Systems is ideal. It has the ability to **FLOW** with the water. This ensures that every surface of the carbon is able to grab chlorine and other VOCs. Carbon Tank Systems are higher quality and therefore used at Hospitals, Car Washes, and many other applications where chlorine removal is imperative

# Why Choose Our Carbon Filters

Our Whole House Carbon Tank System includes the highest quality products.

- Organic Coconut Shell Carbon
- Fleck Brand Valves or Vortec in/out bypass
- Clack Mineral Tanks

The most important element of our carbon filter is that they are fully assembled by Tri-State Waterworks. We choose each part and build the system properly. This ensure our quality is the best in the industry inside and out. Also, by assembling, the internal components are sealed and put together properly.

---

*As a small family owned business, communication is available all day, any day. Rest easy knowing your water is soft and we're always available to support*

---

# Price Transparency

All of our prices are readily available to view here, online, and in person. We make it easy to compare our products and pricing with our competition. This way you can KNOW that you're getting the right products at the best price. All prices **include installation** within 20 feet of plumbing. Any additional plumbing, we will charge time and material.

**Prices include full warranties backed by Tri-State Waterworks.**

## Carbon Tank System WITH Fleck Valve: \$1,500

Ideal for homes without a water softener OR homes with well/cistern water. Valve will backwash system, fluffing up activated carbon and removing sediments.

## Carbon Tank System WITHOUT Fleck Valve: \$1,300

Ideal for homes **WITH** a water softener and on municipal water. Vortec in/out bypass allows the water to flow UPWARD and still fluff up active carbon, but doesn't need to backwash since the water softener already does.

**PACKAGE with a water softener to receive \$300 off.**
